**Cordless
Vacuuming:
Why you
should make
the switch to a
Victor Nimrod.**

Why you should switch to Cordless Vacuuming

Thoroughly vacuuming facilities not only enhances the aesthetic of a room, but raises the level of hygiene, reduces harmful bacteria, and eradicates dirt. But this can be difficult with corded vacuums that are restricted by length, are prone to tangling, and are extremely heavy.

Cordless vacuums have been designed and created to tackle the flaws associated with traditional machines. Weighing significantly less, they are easier to carry, manoeuvre and clean flooring than your standard vacuum. The Cleaning Industry is yet to see a Cordless Vacuum that excels in a commercial environment, until the latest design from the iconic floorcare brand Victor, with their newest model, the Nimrod.

The Victor Nimrod is the first handheld vacuum developed to deliver high performance for light commercial use. More powerful and robust than many domestic stick vacuums, the Nimrod is lightweight and easily manoeuvrable, minimising health and safety risks associated with heavy tub-vacuums, whilst ensuring an ergonomic and comfortable user experience.

Why switch to the Victor Nimrod?

Lighter than standard vacuums.

Smaller than normal vacuums and easy to store.

Unrestricted from cords and proximity to power sockets.

24V battery with a runtime of 35 minutes.

E.P.A Filter ensures clean exhaust air.

Made by Victor Floorcare, industry leading floorcare brand.

The Victor Nimrod benefits from different modifications that can alter how the Hoover is used. Removing the long tube leaves you with a smaller, lighter and more portable alternative. This allows for difficult, tight spaces to be effectively vacuumed with little effort. The attachments can be easily removed and placed back on for ease-of-use and a high-performance that can be tailored to your task.

Unlike domestic vacuums, the Victor Nimrod is equipped with two speed options, ensuring that the vacuum is highly effective in the removal of dust, and particles. Paired with its bagless and cordless design, unlike other commercial vacuums on the market, the Victor Nimrod is the ultimate solution for safe, and effective hoovering.

Commercial vs Domestic Vacuum

Commercial Vacuum	Domestic Vacuum
Designed for commercial use	Designed for household tasks
Low maintenance required	Requires maintenance
Versatile cleaning range	Limited to sucking dry, small debris
Highly cost-effective	Easily breaks, requiring excess costs
