

Tameside NHS Foundation Trust

The trolleys have been a lifesaver with regards to deep cleaning, particularly during COVID. They have room for all our usual cleaning supplies plus the extra equipment we needed, and the pre-dosed mopping system is great...we will be placing another order soon!"

Daniel Alcock, Domestics Manager

100% Infection Control

Helping Cleaning Efficiency

Improving Hygiene

It's an environment where maintaining good hygiene standards couldn't be more important. Different risk areas must all be managed safely to prevent cross contamination and the transfer of hospital acquired infections. Rising costs of their current cleaning system and the need to maintain an ever increasing standard of care saw Tameside NHS contact our team at Arrow.

The Problem

Serving over 30,000 patients across more than 20 square miles of hospital buildings, Domestic Manager Daniel wanted something reliable and easy to maintain that could be used to hold cleaning products and equipment, helping staff carry them safely and securely across hospital buildings and departments without the risk of cross contamination.

Our Solution

After visiting the hospital to assess their cleaning processes, Arrow recommended our modular trolley system. Created bespoke to the Trust's requirements, the trolley not only allowed the Trust to manage their cleaning more effectively, but became a vital part of their deep cleaning routines following the Covid-19 pandemic.

Transparent Document Holders

Ensures cleaning guidance is always visible

100+ Pre-Dosed Mops

Promoting best practice infection control

Plasticised Bag

For hygienic waste disposal

High Capacity Internal Storage

For easy transport of cleaning equipment

Silent Wheels & Bumpers

Reducing noise and disruption on wards

Easy Access

Storage of flat mop frames
